

**Concentration of Sodium Hypochlorite
5.25%**

Household bleach with concentration of active ingredient (sodium hypochlorite) 5.25% is recommended to be used on a dilution ratio of 1:99 for general household cleaning and disinfection

PROPER USE OF BLEACH

FIGHT THE VIRUS STARTS WITH ME

Other Detergents

Bleach

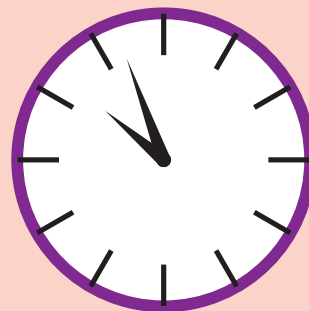

Do not mix the bleach with other detergents as this will cause dangerous chemical reactions, such as releasing toxic gases.

Cold water

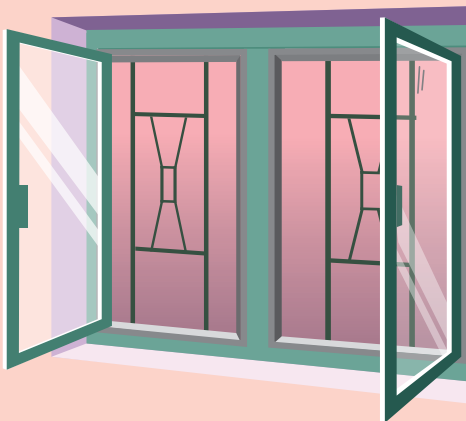

Mix bleach with cold water as hot water decomposes the active ingredient of bleach and reduce its effectiveness.

24 hours

For effective disinfection, use diluted bleach within 24 hours after preparation as decomposition increases with time if left unused.

Dilute and use bleach in a well-ventilated area.
